

Brand Style Guide

Javier Chin

About Me

Hello! My name is Javier and this is my brand style guide!

Positioned at the nexus of data and design, I translate complex analytics into actionable insights and drive product innovation.

By leveraging my background in Data Science, Economics, and Design, I specialise in identifying market opportunities and architecting data-driven solutions across the tech, fintech, and e-commerce sectors.

Design Philosophy

I've always seen myself as a Cub:
an aspiring leader with a hunger for
growth and excellence.

My duality palette is a deliberate
nod to my hybrid background in
Data Science and Interactive Media.
I bridge the gap between analytical
rigor and creative design – a duality
that defines my brand.

Inspired by the journey from cub to lion,
this imagery reflects my personal ambition
and commitment to professional growth

Logo Inspo

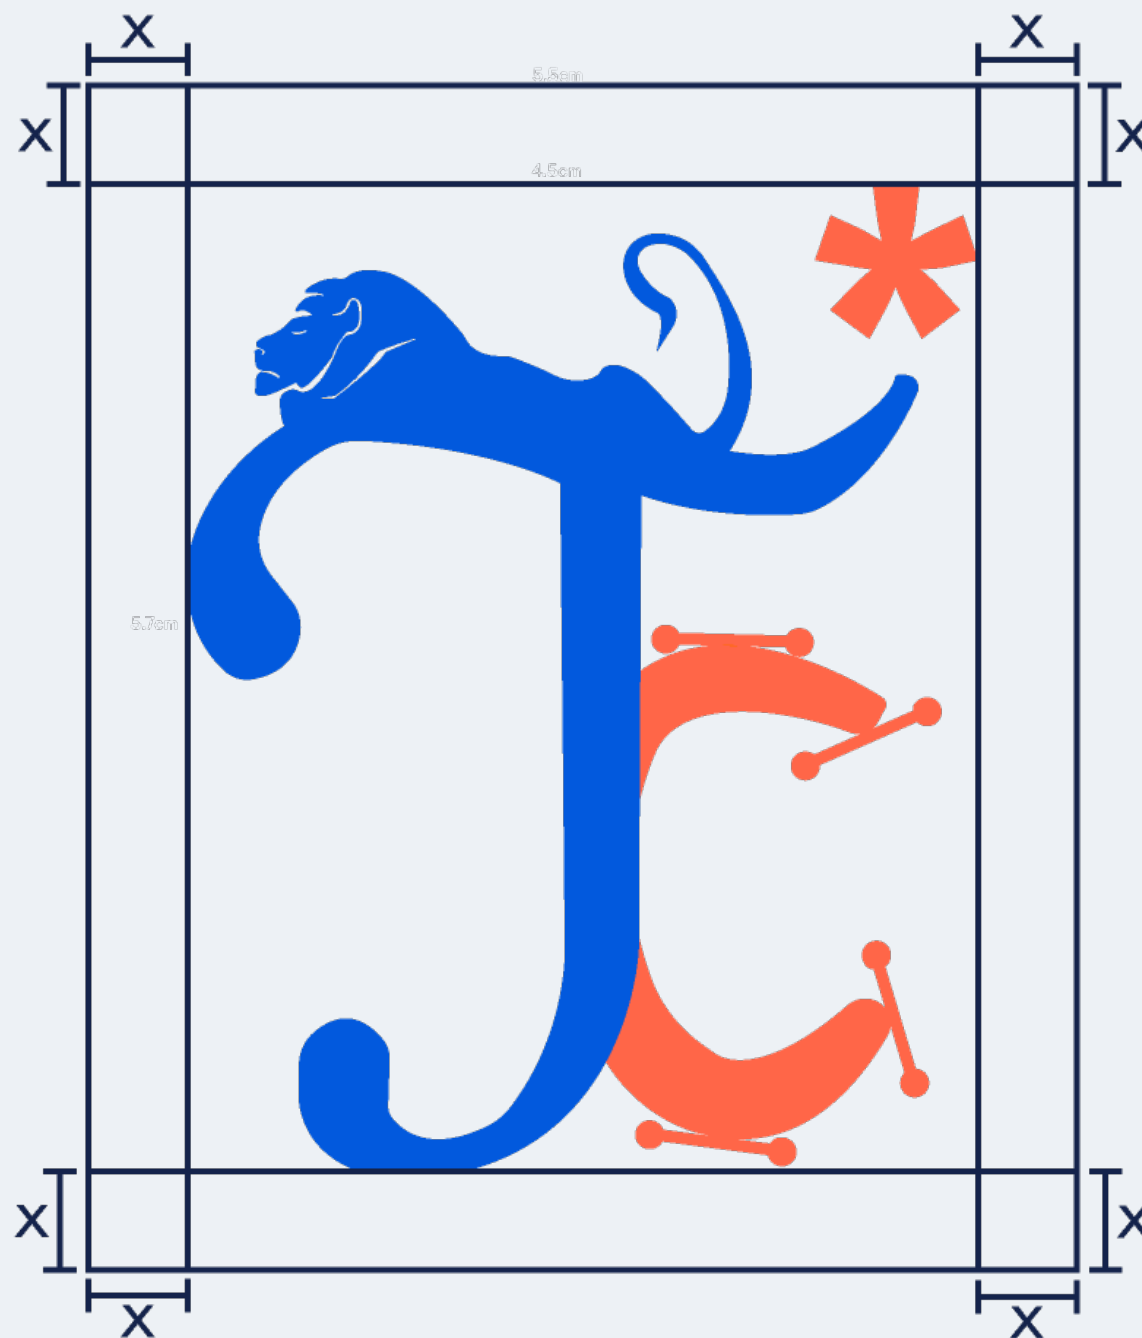

The J is stylized as a mathematical variable,
reflecting the analytical rigor of my Data
Science background

The asterisk signifies mathematical
optimality, mirroring my ambition to
reach the pinnacle of my field

The Bézier-constructed C serves
as a subtle nod to my technical
design skills and craftsmanship

Logo Exclusion Zone

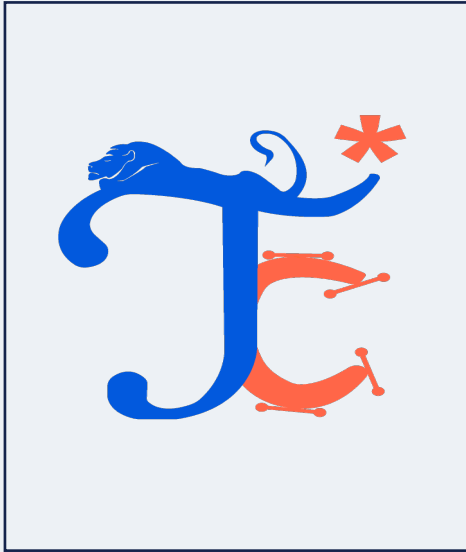

Fig 1: Do not adjust
the
proportions

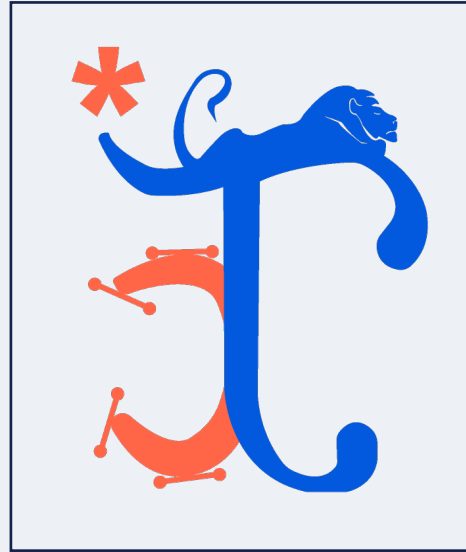

Fig 2: Do not flip
the logo

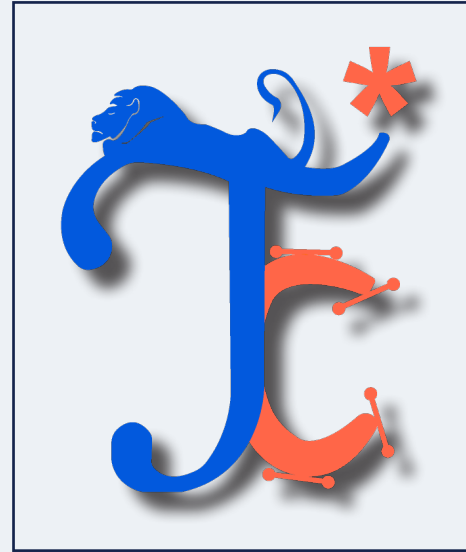

Fig 3: Do not add
a drop
shadow

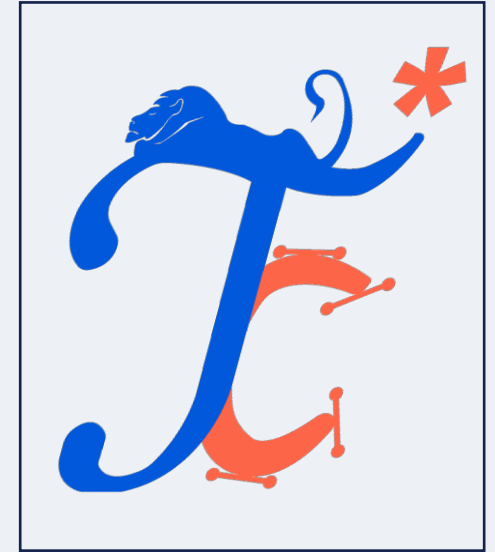

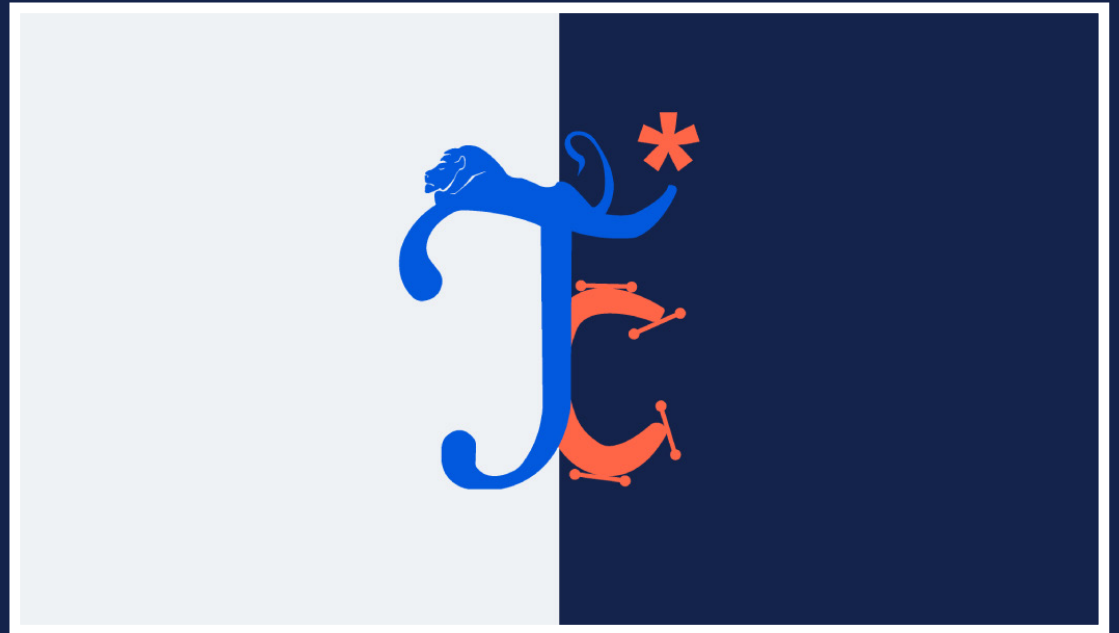

Fig 4: Do not shear
the logo

Experience

Education

National University of Singapore (2023-2027)

B.Sc (Hons) in Data Science and Economics

Minor in Interactive Media Development

NUS College

Euniona Junior College (2019-2020)

H2 History, Economics, Literature, Mathematics (HELM)

H3 History

90 Rank Points

Projects

IT1244: Artificial Intelligence: Technology and Impact

Utilized convolutional neural networks to conduct sentiment analysis on Airlines Tweets

NST2062: Mind and Machine

Trained TimeFormer and Vision Transformer to predict American Sign Language (ASL)

NM3243: User Experience Design

Designed a web-based interface with lo-fi prototype for Scheduling and Video Conferencing System for Students

Introduction

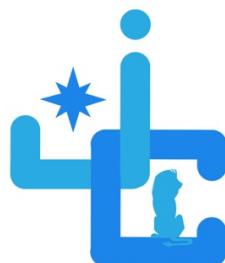

Heading into the final project, I had no expectations in mind. All I wanted to create is something that represented me and that feels truly me. It did not have to be aesthetically pleasing, but it must contain aspects of me that I want everyone to see! From there, I started with my logo design!

Logo

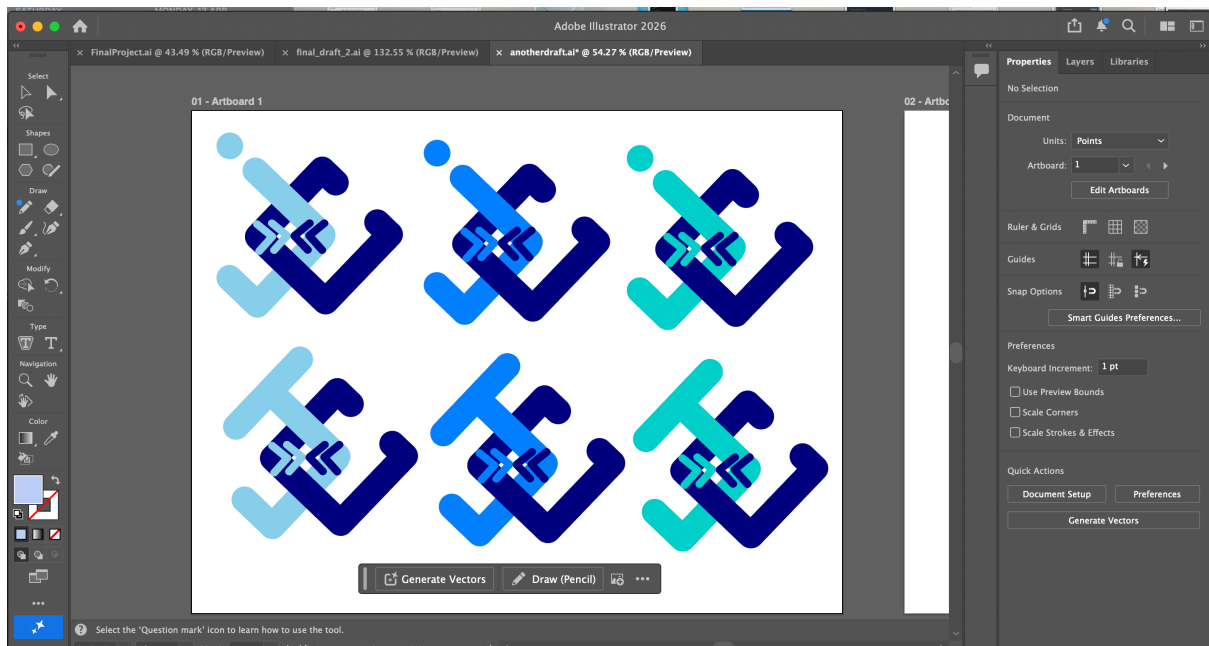

My initial idea of my logo came from the idea of a cub, as I've always seen myself as one as I have much room for growth. This led to me creating a logo based on it.

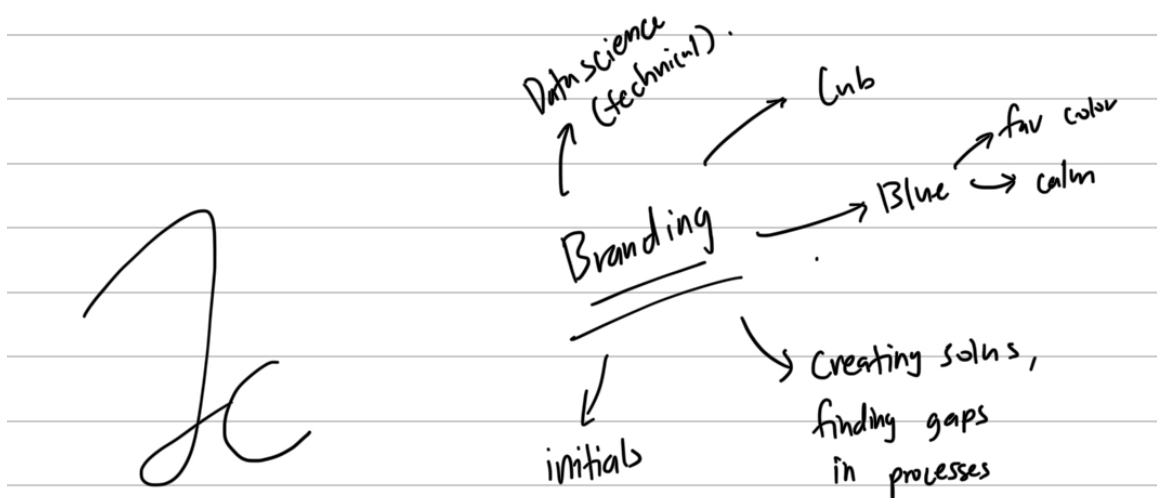

However, after consultation, I came to realise that it needed more. My own brand can't simply be a logo of a cub with my initials 'j' on it. It needed to represent my skillset, my passion and my aspirations. One key feedback that I received was that I need to be more integrated into the logo. This saw me basing my logo on my initials and attempting to branch out from there.

As I aspire to be a product manager, I wanted something that was clean but representative of it. This led to my 3rd draft whereby the arrows indicate my ability to bridge the gaps. However, it still did not sit right with me.

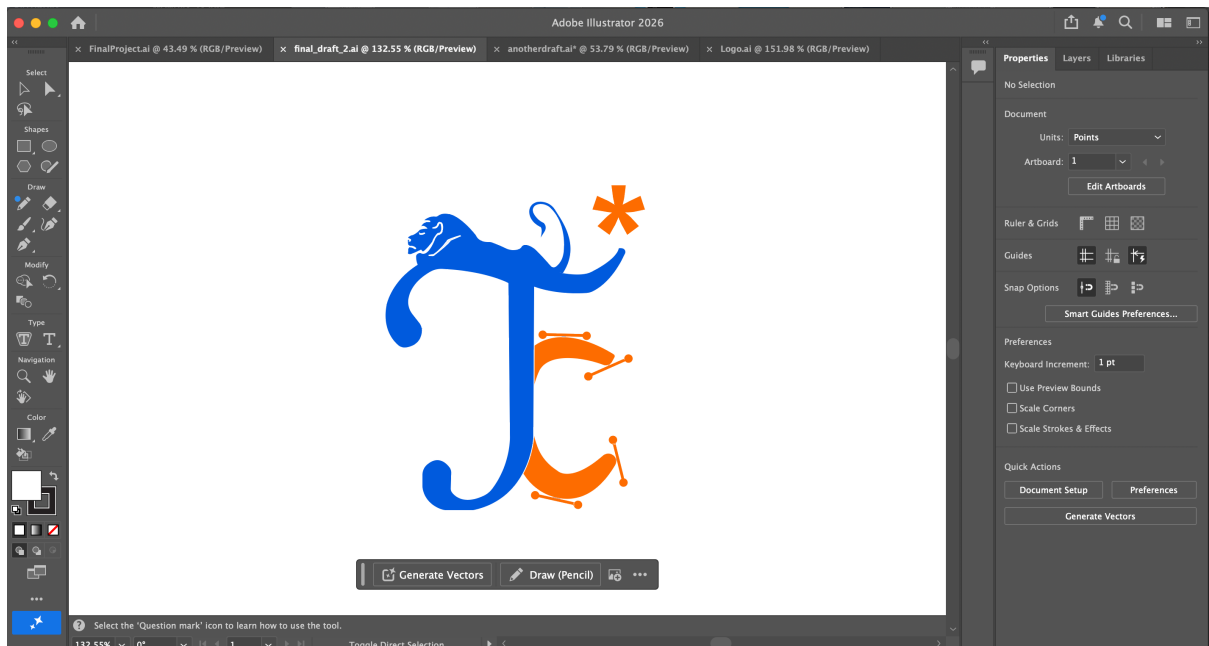

As such, I started from scratch and brainstormed on how I want to be seen professionally. This led to the below sketch and from there, I managed to create the current logo that I am satisfied with.

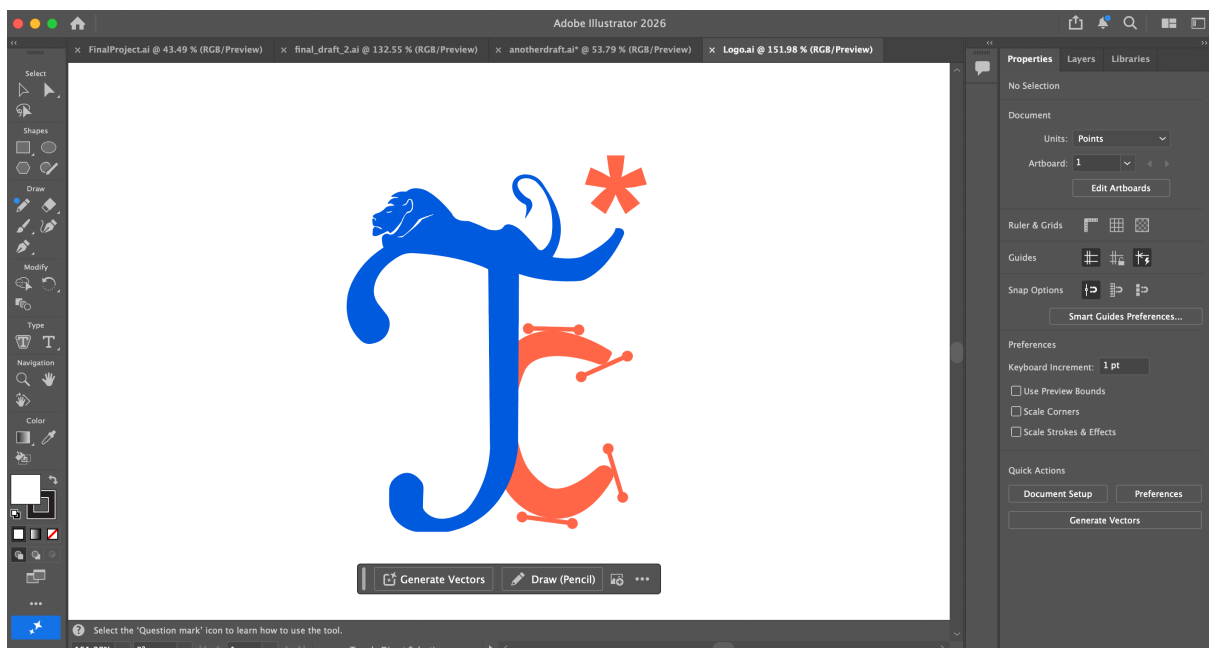

The logo consists of the following aspect:

1. My mathematical and data science background, represented by the mathematical notation of 'J'
2. My aspiration to grow and develop professionally into a leader, represented by the sitting lion on the 'J'
3. The design-side of myself, represented by the Bézier-constructed C drawn in Illustrator
4. My motivation to be the best in my field, represented by the asterisks which correlates to the idea of optimality
5. The blue representing my mathematical background while the orange representing my design thinking abilities

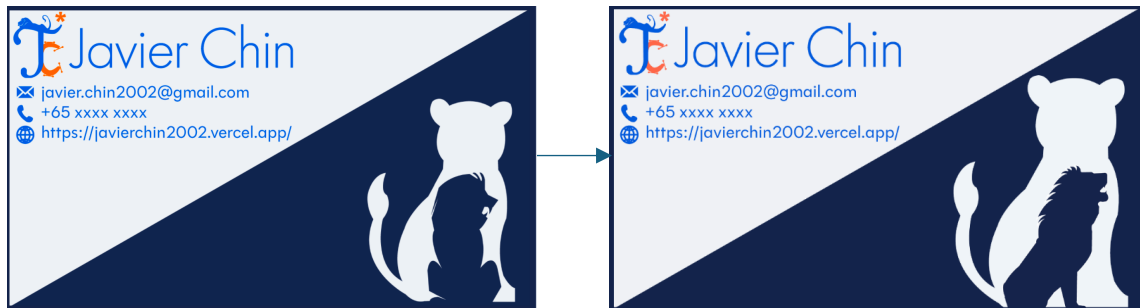

During the critique, my peers noted that the colours and the lion felt too “NUS”-coded, suggesting that my brand was misinterpreted. Hence, they recommended me to switch to red, yellow or caramel, which I later settled on a reddish-orange pastel colour. This helps to not only distinguish myself but also serves to provide a softer tone and feel, illustrating my ability to listen to user feedback and uncover pain points.

Business Card

After settling on my logo, I wanted a business card that is professional and clean. Hence, I followed the conventional business card design, with the back being just my logo and the front being contact information. I decided to incorporate 2 colours: a cloudy shade and a dark blue shade. This helps to bring out my logo by playing on the contrasts and illustrates a sense of professionalism with the dark blue. Thereafter, I wanted my business card to be something that sparks conversation. I want people to go: “oh! What is this here?”. This led to me incorporate a silhouette of a lion cub and within it, an adult lion. I hope that this element drives people’s curiosity into my personal brand. During the peer critique session, it was noted that the adult lion imagery bore a strong resemblance to the Merlion and I went back and redesigned it.

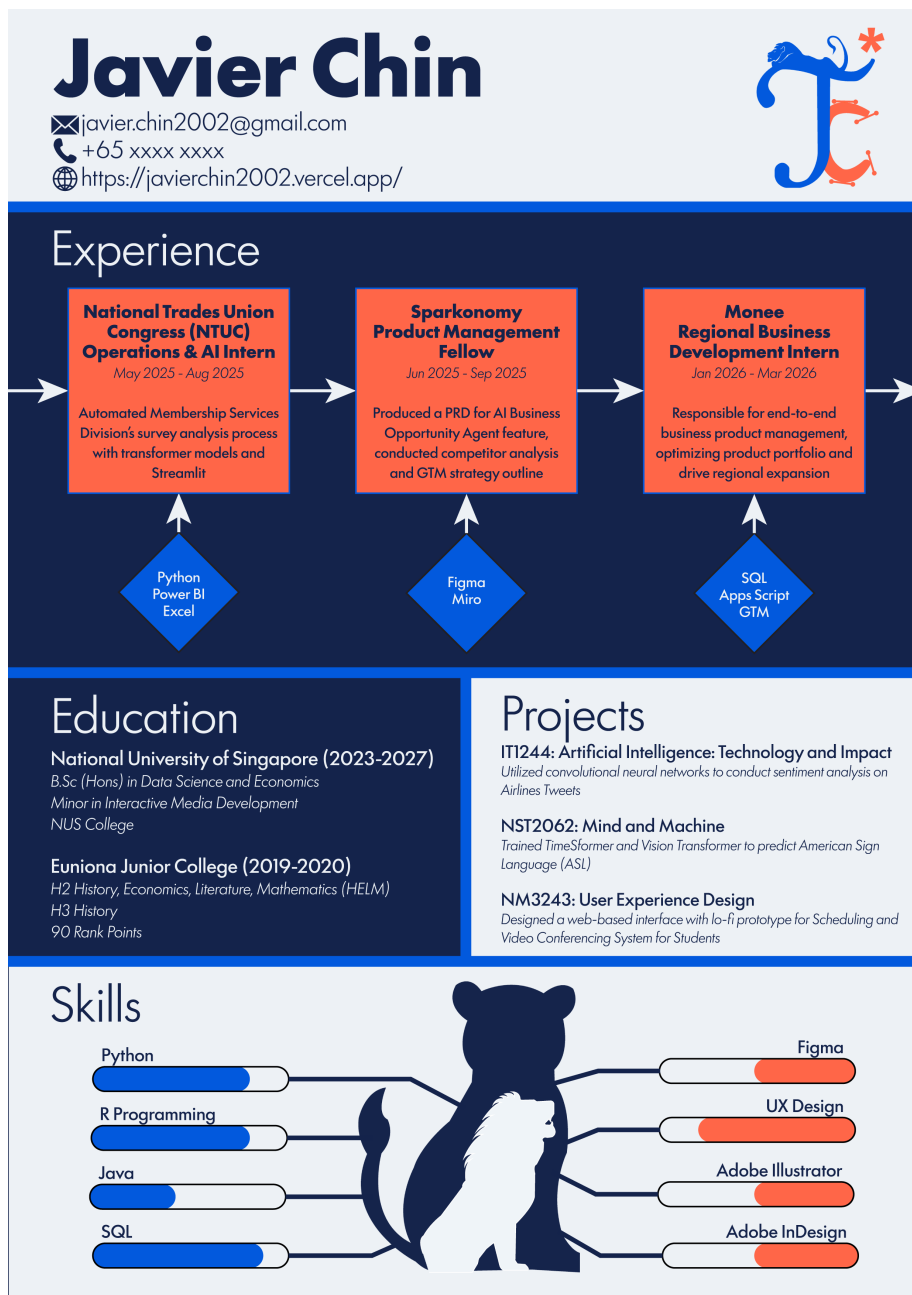

To address the feedback regarding visual complexity from final critique, I simplified the layout and removed repetitive branding. This cleaner approach ensures the design remains impactful and professional without sacrificing the essential elements of my brand.

Resume

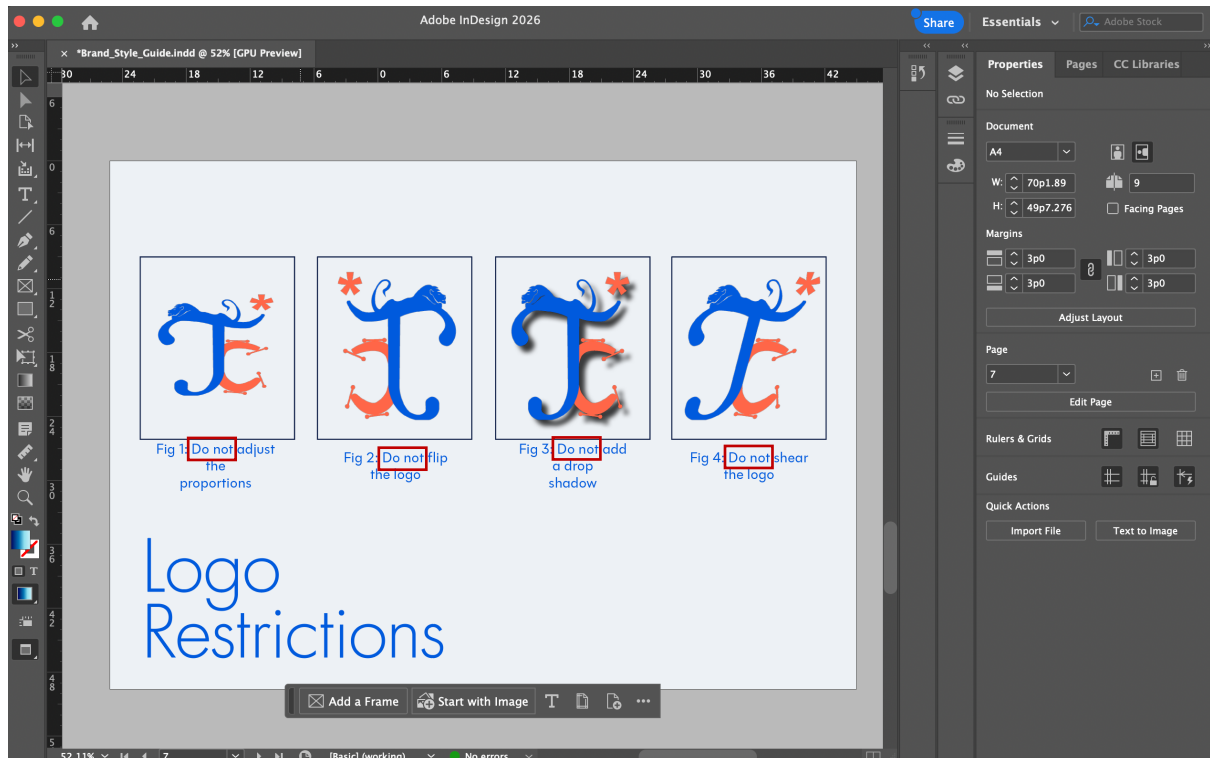

As for my resume, I wanted to create something that is clean and incorporates all aspects of me. As such, I illustrated my Experience in terms of a flowchart, much like a user journey flow chart, which speaks to my aspiration to be a product manager. Thereafter, I designed 'Education' and 'Projects' to be clean and highly readable. Lastly, I wanted to create a lasting impact and hence utilised the same cub and lion element to illustrate my skillset, using the colours to differentiate between technical coding skills and design skills.

Post-critique, I increased the leading and flowchart scale to enhance legibility. I also thickened the blue dividers to better delineate each section, ensuring a clearer visual hierarchy.

Logo Restrictions

Following my colour-coded theme, my logo restrictions slide was inspired by scientific and mathematical papers, with the use of Fig. My peers found that it was interesting but noted that I should include ‘Do not’ to prevent misinterpretation.

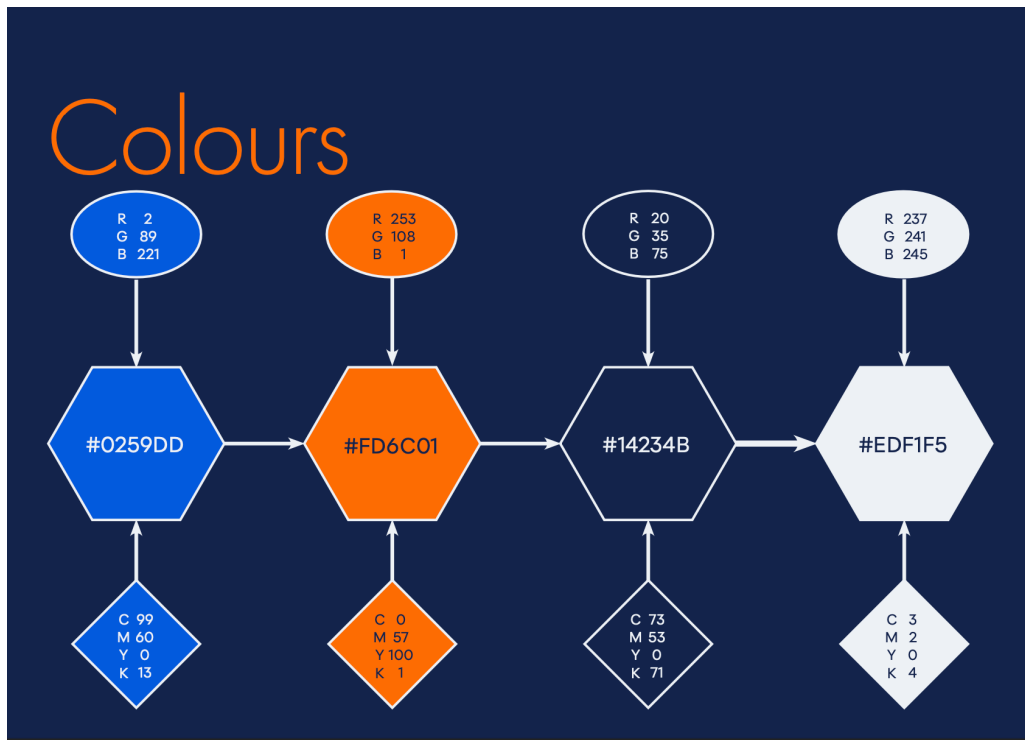

Typography

While I wanted something that was fun and bold, such as Yerk or Sneakers Pro, I found it difficult to style it with my brand. Therefore, I settled on a cleaner and more professional font, one that prioritises readability amidst my already complicated BSG. Hence, I used Futura100 for my headers and Polymath Text Regular for the texts to maximise readability.

Colour Palette

While I took inspiration from Pinterest for my colour palette, I had trouble figuring out how to illustrate them. My initial idea was to illustrate it much a user journey flowchart. However, it did not seem to fit into my entire brand style guide and felt off. As such, I sought advice from my peers during the critique, and some suggested I utilised the cub silhouette. I then pivoted into a much cleaner and aesthetically pleasing slide.

Final Edits and Cleanup

14 Apr 15:42

Hi Javier, I'm glad to see how your work has transformed from the previous round of critique! In your resume, I find that the black text in the orange boxes slightly hard to read, probably because the orange is quite vibrant and glaring. You may also want to consider standardising the font colours used in the resume, maybe sticking to just white (against darker backgrounds) and dark blue (against lighter backgrounds).

15 Apr 12:25

Interesting take, Javier! I love the concepts behind it, but I feel like the silhouette graphic that you have chosen to use in your name card can be misleading as one would think that this is the other logo. If you wish to keep at this, perhaps consider articulating what this is WITHIN the BSG before you use them and use them more intentionally across the pages as a, perhaps, footer with a page number to tie everything in together. Resume text leading needs to increase further. Some food for thought!

16 Apr 11:03

Hi Javier! I appreciate the rationale behind the use of two contrasting colours to ground your brand, but on a visual level, your logo definitely works best on a single toned background. Consider conceptualising the "alternation" not as a literal split down the middle, but as thoughtful engagement of the colours for different purposes. I believe the use of those two colours in your illustration of cub-lion achieves that quite well; maybe that is sufficient. The dark frame, the two-tone background, and the lion-cub illustration on your business card overcomplicates things. I encourage you to exercise restraint (think, also, do you also need your logo on both sides?) as you continue to work on your deliverables. I would also like to see the resume more clearly delineated by its edges. Please note that the exclusion zone should be expressed as a ratio of your logo instead of real dimension, as it will not be feasible to enforce that!

Mark as unread

To clarify the inspiration behind the cub-lion and dual-toned theme, I introduced a Design Philosophy section. I also re-balanced the slide sequence to maintain an even split between navy and white backgrounds, grounding the BSG on my core brand identity. Lastly, I ensured all the elements are within the guidelines on InDesign.

Notable Adobe Functions/Tools

1. Illustrator
 - a. Pen Tool: Elements drawing
 - b. Layers: Logo layering
 - c. Group: Workspace discipline
 - d. Stroke and Fill: Colouring, borders and arrows
 - e. Place: Importing other elements into resume
2. InDesign
 - a. Ruler: Consistent measurement and alignment
 - b. Guidelines: Alignment

Conclusion

All in all, this project was both frustrating and enjoyable. I find the beginning the most difficult part of the project as I had no sense of direction in mind. It took me 2 weeks to come up with a design that spoke to me and made me feel “yes this is it”. I’ve been through so many rounds of iterations I’ve overwritten many of those files. Yet, it was easier once I really pinned down how I want to brand myself and stuck to the few key aspects. As for the software used, I curated my logo, business card, resume and other elements on Illustrator and used InDesign to piece them together. Ultimately, this piece of work was fulfilling as it allowed me to not only showcase my ability to use Illustrator and InDesign but also allowed me to reflect on my identity and aspirations.
